September, 2024

To whom it may concern,

This is to acknowledge that Begol Osama has participated in the Software Engineering Capstone project work between January and May of 2024. With his team of students from Alamein International University, Virginia Tech, and SUPSI, Begol worked on building a management system for VT's Steger Center for International Scholarship in Switzerland. By the end of the semester, they were able to complete the requirements of the project, and they demonstrated deep understanding of the principles and concepts of software development. The group members have also travelled to Switzerland to spend in-person time with their counterparts as well as to present their final products.

For any inquiries, please contact me at: seyam@vt.edu

Sincerely,

*Mohammed Seyam*

Mohammed Seyam, Ph.D.
Collegiate Associate Professor
Department of Computer Science
Virginia Tech
